

CAS ENGINEERING : Sediment Control Flow Chart

- 1 Lots 40,000 square feet and greater may require a Forest Conservation Exemption or a Forest Conservation Plan.
- 2 If providing a PE of < 1", the plan must not increase the runoff to the adjoining private properties as required for Drainage Plan Review.
- 3 If an engineered sediment control permit (SCPE) is not required, Drainage Plan review is performed by the Right-of-Way Division.
- 4 **Net Increase of Building Coverage:** Interpreted as the net increase of roof area.
Example: If adding 500 SF of new roof area (including bay windows), but removing 150 SF of roofed area elsewhere for a net increase of 350 SF, a Drainage Plan will not be required.

LEGEND:

- BPSP Building Permit Site Plan
- DP Drainage Plan
- ROE SWM Right of Entry Agreement
- SCPE Sediment Control Permit
- SCPL Sediment Control Plan
- SLDA Small Land Disturbance Application
- SWM Stormwater Management Plan
